

Prompt.

I have a file index.html that was working at first and part of it no longer does.

All of the html files are stored in a folder on my desktop called "audit-site".

If I double click on the index.html (Windows 10) the index opens in my browser as if it was on a website.

I can click on most of the page options and the browser opens my chosen page.

The section that no longer works is the "SECTION 1: RAW DATA FROM EXCEL TABLE"

Click on any of those files and my browser gives the error: **Your file couldn't be accessed.** It may have been moved, edited, or deleted.

ERR_FILE_NOT_FOUND.

My files have not been moved and I think that the html is good but can you check please.

As the index is large and I do not want to cause data drift, I only include the part that does not work.

I will also upload a png image showing the audit-site folder.
